

Leading PC Monitoring Software, [PC Pandora](#), Goes Windows Vista Compatible

Restructured Website and Vista Compatibility Make Monitoring PC Activity Even Easier!

Some Alarming Stats Concerning Online Activity:

- 71% of all parents stop monitoring their child's use of the Internet after the child turns 14, not knowing that 72% of all Internet-related missing children are 15 years of age or older. – [Dist. Attny. County of Los Angeles](#)
- To take a proactive part in the battle against inappropriate employee Internet activity, employers should put procedures into place to educate and monitor employees. If it can be demonstrated that the employer took affirmative steps to prohibit illegal activity, liability for employee actions is much less likely. – [Shindler Journal of Law, Technology + Commerce](#)
- According to a 2004 survey conducted by St. Bernard Software of 200 technology decision-makers from small, medium and large school districts in suburban, rural and urban settings in 41 states: 48% estimate their students spend more than two hours per week on the Internet during school hours and 59% Report incidents of students accessing inappropriate Web content in the past year

Story Description:

The Internet can be a wonderful place. It can be a friendly community and a valuable resource. But it can also be a safe haven for online predators and mischievous employees. It can also be an easy portal for infidelity. Every day there are more and more stories of potential predators soliciting children online and more and more incidents of employees abusing intellectual property rights, not to mention the ongoing problems many spouses and partners have with online cheating and pornography

That's why there are tools available to make the job of safeguarding and monitoring online activities easier. PC Pandora is part of the new generation of software designed to give owners control over the usage of their PC. Designed to operate either silently or in the open, monitoring software allows the administrator of any given computer to create a visual record of that machine's usage. Not limited to family desktops, monitoring software has a wide range of uses, including corporate security and intellectual property protection.

The newest edition of **PC Pandora, version 4.2.5, is now Windows Vista compatible**. In addition, the website has been redesigned to lend more customer support. Available for interviews and comments is Director of Internet and Safety Relations for Pandora Corp., Sean Montana. He can give details on the new improvements to the user-friendly, interactive website, as well as the new Vista-compatible version 4.2.5. He can also give some helpful tips for keeping your kids safe online – as well as how to catch a cheating spouse. He can also discuss why it may be in any employer's best legal interest to monitor his or her employees' activities.

Note: This story/interview is being brought to you directly from the Pandora Corporation. To gain a fair and balanced understanding of our software, products can be sent for your trial use. Interviews can be conducted via phone; we can also send you a Windows Media Player video file to use as B-roll.

About PC Pandora: Pandora Corporation was formed with one goal – to help our customers monitor, control and protect their families and themselves online. First released in mid 2005, PC Pandora has been constantly upgraded to industry-leading specifications. The program has [received accolades](#) from users, reviewers and even school districts and law enforcement agencies, who use the program to help in the day-to-day supervision of the children and citizens they are charged with protecting. With the release of Windows Vista-compatible version 4.2.5 and a newly upgraded interactive website, PC Pandora has vaulted into a leadership position by boasting a combination of features that unparalleled in the monitoring industry.
